

A pair of Bass Shakers from Aura Systems is the perfect way to provide car audio systems with a big bass boost without the cost or the complexity of an expensive subwoofer system.

**Key
Features:**

- *Patented technology*
- *Low cost*
- *Big bass feeling*
- *Occupies no usable space in vehicle*
- *Easy to install*

Bass Shakers easily mount underneath a car's seat and take up no usable space in the car. They connect like speakers to a standard automotive amplifier and work on the concept that low bass is mostly felt rather than heard. When properly installed, Bass Shakers cause the area mounted upon to resonate and vibrate with the dramatic intensity of deep bass.

This resonance is perceived as clear and deep bass without the damaging effects which often accompany big sound pressure levels. Bass Shakers generate astonishing body-thumping force without distortion, delivering a clean and clear music experience with a powerful bass foundation.

Because Bass Shakers provide tremendous bass energy for their small size, they're ideal for use in cars and trucks that have limited space. And amazingly, bass can be fully experienced in convertibles where big bass often escapes through the open roof.
