

Bass Shakers from Aura Systems add the exciting dimension of feeling to the sights and sounds of video arcade games, movies, stage shows, and multimedia attractions! By actively converting bass sound waves into spine-tingling vibrations, Bass Shakers turn entertainment into a "moving experience."

**Key
Features:**

- *Compact design*
- *Simple installation*
- *Low cost/low maintenance*
- *Increases revenue*

Bass Shakers bring coin-operated video arcade games to life by transforming a game's audio output into body-pulsing vibrations. With Bass Shakers installed in arcade seats or floor platforms, players can feel everything from a fighter's punch to the roaring engine of a formula one race car.

In movie theaters, the action jumps off the screen, the soundtrack comes alive, and the entire experience is intensified. Bass Shakers hook up like a speaker and easily mount directly to a standard theater seat.

Installed in seats, tables, booths and floors of showrooms and stage theaters, Bass Shakers provide audiences with a more complete entertainment experience. Las Vegas stage extravaganzas, hit Broadway musicals, and rockin' concerts virtually jump off the stage into customers' seats. Bass Shakers are ideal for bringing music, on-stage special effects, and lasers to life.

Bass Shakers turn up the revenue potential of any entertainment experience. And thanks to low purchase, installation and maintenance costs, the Bass Shaker is a virtual winner in the race to provide affordable upgrades and enhancements to existing facilities.
